Santiago, Santiago Metropolitan Region, Chile

Summary

Diplomated 2016, developer web fullstack, Linux user-end , enthusiast, learning lover to improve my skills. English intermediate speaker, French and Italian too.

My main TI role is oriented to programming especially in backend languages such as python and php also using several web tools as html5, css3, javascript with some frameworks like bootstrap4, bulma css, materializecss to website layout as well learning js technologies as JQuery, additionally I use Django and Flask frameworks through python scripts developing client-server apps,.

The database is another area managed via orm-sqlalchemy connected to mysql. Using git with their repos remotes as github and gitlab.

Also php developer junior and have a little experience using elastic search

My main OS is Linux and derivatives as Debian, Fedora and arch managing, installing and maintaining its platform, setting up their service like apache2, mysql, bash scripting develop, install docker in apps and the capability to learn documentation to grow up the system server.
